A New Emery Wheel Dresser.

Am. Machinist 10/20/88—5.

Experienced emery wheel users fully appreciate the value of a tool which can be kept always at hand, and can be applied to the wheel at any moment, either to make it true or to remove the effects of a glaze. It is with the object of supplying such a tool that the Norton Emery Wheel Co., Worcester, Mass., have placed upon the market the tool which we illustrate herewith.

The cutters are corrugated, and made in such a shape that they can be used until worn down nearly to the hub. They are cast of a composition specially adapted to the purpose, which renders them very tough and durable, and run on a steel pin which is easily removed and readjusted when new cutters are required. As the cut shows, the entire tool is so designed as to be neat and serviceable, and we have no doubt will meet with a favorable reception by emery wheel users.
